

The Broken Heart property has a potential for gold throughout the entire ten kilometer length. The property consists of eighty-two units in ten claim blocks. It lies within sight of Leitch Gold Mine and Sand River Gold Mine. The southern boundary of the claims is one kilometer from Empire Mine. These three past producing mines are presently owned by Premier Gold.

The property is easily accessible by Highway 11-17 from Thunder Bay and then by Highway 11 north to Beardmore. The property is two km north-east of the town of Beardmore, Ontario. The southern line crosses Highway 580 one hundred meters north. Three short holes have been drilled on this property.

Most of the rock is clastic metasediments. The northern part lies in the intermediate metavolcanics. The alteration is mostly quartz-ankerite with some axinite vein through-out the northern section of the property. An iron formation crosses the central section. South of this iron formation, some quartz and some tourmaline is noted. Gold is found in the iron formation. I located gold in the rusted shear with arsenopyrite and pyrite. The main showing was assayed and returned results as high as 2 oz/t. Assays as high as 1 to 8 g/t Au were returned from the iron formation. This iron formation starts at Lake Nipigon and continues for almost 90 miles.

CLAIM NUMBER	TOWNSHIP	CLAIM UNITS	RECORDING DATE	CLAIM DUE DATE	WORK REQUIRED
